

HandsMen Threads: Elevating the Art of Sophistication in Men's Fashion

ABSTRACT

This project presents a customized Salesforce CRM system designed specifically for **HandsMen Threads**, a high-end men's clothing brand. The main goal was to optimize business workflows, enhance customer engagement, and ensure data security throughout all areas of the company.

The system revolves around five core custom objects: Customer, Product, Order, Inventory, and Marketing Campaign. Automation was executed utilising Record-Triggered Flows, Scheduled Flows, Email Alerts, and Apex Triggers to manage duties including order confirmations, inventory monitoring, and updates on customer loyalty status.

To maintain data accuracy and ensure secure access, validation rules and a role-based permission structure were included. The solution also features a scheduled batch job written in Apex that is used to update the quantities of items that are in low stock.

The platform helps build better relationships with customers and helps the business grow more efficiently by using logic-based workflows and automated communication tools.

OBJECTIVE

The main objective of this project is to develop and implement a customized Salesforce CRM solution for HandsMen Threads to streamline core business operations, maintain data integrity, and enhance customer satisfaction.

By building a centralized system to manage customers, orders, products, inventory, and marketing campaigns, the project aims to:

- **Automate crucial processes** similar as order confirmations, loyalty status updates, and stock alerts.
- **Insure accurate and consistent data** entry using validation rules.
- **Enable real-time visibility** of inventory and customer interactions.
- **Enhance internal team cooperation** through role-based access control.
- **Deliver personalized customer experiences** through targeted communication and loyalty programs.

TECHNOLOGY DESCRIPTION

Salesforce:-

Salesforce is a cloud-based Customer Relationship Management (CRM) platform that helps businesses manage client data, automate processes, and ameliorate service, marketing, and sales operations. It provides point-and-click tools as well as programmatic capabilities (like Apex and Flows) to build custom business solutions.

Custom Objects:-

Objects in Salesforce are like tables in a database. Custom Objects are created to store specific data.

Example:

- Customer_c - Stores customer info
- Product_c - Stores product details
- Order_c - Stores orders

Tabs:-

Tabs are used to display object data in the Salesforce UI.

Example: A tab for Product_c allows users to easily view and manage products.

Custom App:-

An App in Salesforce is a collection of tabs grouped together for a specific business purpose.

Profiles:-

Profiles define what a user can see, do, and edit in Salesforce. It controls object permissions, field access, and more.

Roles:-

Roles control the data visibility in Salesforce's role hierarchy. It's used for sharing settings and reporting.

Permission Sets:-

Permission Sets grant additional permissions to users without changing their profile.

Validation Rules:-

Validation Rules ensure data entered meets business criteria to promote professionalism.

Example:

- Email must contain @gmail.com
- Stock cannot be negative

Email Templates:-

Predefined formats for sending emails to customers or users.

Example:

- "Order Confirmation" template

Email Alerts:-

Email Alerts are actions in Flows that send emails using predefined templates.

Example: When a loyalty level changes, an email is sent to the customer.

Flows:-

Flows automate business logic without code. They can create, update, or send notifications.

Example:

- Flow triggers email alerts whenever a new order is updated to confirmed(Status).

Apex:-

Apex is Salesforce's object-oriented programming language. It allows developers to write custom logic and automate complex processes.

Example Triggers:

- Update Total_Amount_c in orders
- Reduce inventory stock

DETAILED EXECUTION OF PROJECT PHASES

1. Developer Org Setup

- A Salesforce Developer Org was created using <https://developer.salesforce.com/signup>.
- The account was verified, password set, and access was granted to the Salesforce Setup page.

Build enterprise-quality apps fast and get hands-on with Agentforce and Data Cloud.

Sign up for your Developer Edition.

- ✓ Build apps fast with drag-and-drop tools
- ✓ Go further with Apex code
- ✓ Build AI agents with Agentforce
- ✓ Harmonize your data with Data Cloud
- ✓ Ground Agentforce with structured and unstructured data
- ✓ Integrate with anything using APIs

Company Country/Region

Your org may be provisioned on or migrated to Hyperforce, Salesforce's public cloud infrastructure.

☐ I agree to the Main Services Agreement – Developer Services and Salesforce Program Agreement. I acknowledge, as described in the Developer Documentation: (1) the Developer Edition includes autonomous and other generative AI features; and (2) Salesforce may limit use of those features and the org, and may terminate any org that has been inactive for 45 days.

2. Custom Object Creation

Five custom objects were created to store business-critical data:

- **HandsMen Customer** – It Stores customer info like Customer Name, Email, Phone, Loyalty Status and Total Purchases.
- **HandsMen Product** – It Stores product catalog details like Product Name, SKU, Price, and Stock Quantity.
- **HandsMen Order** – It Stores orders placed by customers, including Quantity and Status and Customer Email.
- **Inventory** – It Tracks Stock Levels and warehouse location.
- **Marketing Campaign** – It Stores promotional campaign activities and scheduling.

Steps followed:

- Navigated to Setup → Object Manager → Create → Custom Object
- Provided label name, plural label name, and Allowed reports and search.
- Saved and created Tabs for all the custom objects.

3. Creating the Lightning App

- A custom Lightning App named HandsMen Threads was created.
- Included tabs: HandsMen Customer, Order, Product, Inventory, Campaign, Reports, etc.
- Assigned to the System Administrator profile.

4. Validation Rules

To ensure accurate data entry and enforce business logic, the following validation rules were applied:

- **Order Object:** Prevents saving if Total_Amount_c <= 0.
Error: "Please Enter Correct Amount"
- **Customer Object:** Validates email contains @gmail.com.
Error: "Please fill Correct Gmail"

5. User Role & Profile Setup

- Cloned the Standard User profile to a new profile named Platform 1 and added access to necessary custom objects.
- Created roles for different departments:
 - Sales Manager, Inventory Manager, Marketing Team

6. User Creation

Users were created in Salesforce and assigned appropriate roles and profiles to reflect their responsibilities:

- Niklaus Mikaelson - Assigned the Sales role
- Kol Mikaelson - Assigned the Inventory role
- These role-based assignments help enforce proper data access and process control within the system.

7. Email Template & Alerts

Created three email templates:

- Order Confirmation Sent on order status Confirmed
- Low Stock Alert-Sent when Inventory < 5 units
- Loyalty Program Email Sent when loyalty status changes

Corresponding Email Alerts were created using these templates and linked to automation flows.

HTML Email Content Required Information

Subject Your Order has been Confirmed!

Dear {!HandsMen_Order__c.HandsMen_Customer__c},
Your order #(!HandsMen_Order__c.Name) has been confirmed!
Thank you for shopping with us.
Best Regards,
Sales Team

8. Flow Implementations

a. Order Confirmation Flow

- Triggered when an order is updated to Confirmed.
- Sends an Order Confirmation email to the related customer.

b. Stock Alert Flow

- Triggered when Inventory stock drops below 5.
- Sends Low Stock email to Inventory Manager.

c. Scheduled Flow: Loyalty Update

- Runs daily at midnight.
- Loops through customers and updates their Loyalty Status based on total purchases.

7. Apex Triggers and Classes

- **Order Total Trigger**: Auto-calculates Total Amount based on quantity and unit price.
- **Stock Deduction Trigger**: Reduces stock when an order is placed.

- **Inventory Batch Job Class:** It does both
Loyalty Points Calculation - Updates customer points weekly.
Inventory Sync - Syncs stock levels with external warehouse system.

PROJECT EXPLANATION WITH REAL-WORLD EXAMPLE

Let's walk through it like a real customer interaction

1. Customer Registration

- A customer, Elijah Mikaelson, visits the store or website.
- In Salesforce: A record is created in the Customer object with his name, phone, email, etc.
- Validation Rule: Ensures the email is valid (e.g., must contain @gmail.com).

2. Product Setup

- The admin adds products like Shirts, Jeans, etc., into the Product object
- Each product includes details such as price, SKU, and available stock.
- Corresponding Inventory records are created to manage stock levels.

3. Order Placement

- Elijah decides to buy 2 shirts (each 2500). An order is placed.
- In Salesforce: A new Order record is created.
- Apex Trigger: Automatically calculates $\text{Total_Amount_c} = 2 \times 2500 = 5000$.

4. Inventory Update

As soon as the order is placed:

- Apex Trigger on Inventory: Reduces shirt stock by 2.
- Validation Rule: Ensures stock never goes below 0.

5. Loyalty Program

- Elijah now has a total purchase of 500.
- A trigger on Customer checks his total purchases.

Based on the value:

<500 → Bronze

500-1000 → Silver

>1000 → Gold

- So, Elijah becomes a bronze member.

6. Email Notifications

- When a new order is placed or loyalty status is updated:
- Flow + Email Alert is triggered.
- Elijah gets an email:
"Thanks for your purchase! Your loyalty status is now Silver."

7. Users and Roles

Salesforce users like store staff are created:

- **Niklaus Mikaelson** - Sales Role (Platform 1 Profile)
- **Kol Mikaelson** - Inventory Role (Platform 1 Profile)

CONCLUSION

The HandsMen Threads CRM system built on Salesforce successfully streamlines key business processes like customer management, product cataloguing, order processing, inventory tracking, and loyalty program automation. By leveraging Salesforce tools like Custom Objects, Flows, Validation Rules, Email Alerts, and Apex, the system ensures accurate data entry, real-time updates, and enhanced customer experience. Through automation and well-structured user roles, the platform minimizes manual errors, speeds up operations, and provides better insights into sales and stock.

Future Scope:-

1. Customer Portal Integration

- Build a Customer Community Portal where customers can log in, view orders, and track loyalty status.

2. Mobile App using Salesforce Mobile SDK

- Enable store staff to manage inventory and orders on the go using a mobile interface.

3. Reports & Dashboards

- Create detailed sales and inventory dashboards for management to monitor trends and performance in real-time.

4. AI-Powered Recommendations (Einstein)

- Use Salesforce Einstein to provide personalized product suggestions based on past purchases.

5. WhatsApp/SMS Integration

- Notify customers via WhatsApp or SMS about order confirmations and loyalty updates.
